- [APU](#)

Flight Date:

Friday, May 20, 2011

Status:

Green

All 16 APUs are currently collecting data.

APU01: WLAN antenna needed readjusting.

APU04: A water leak caused the power supply to fail around 15Z. The leak was sealed, the power supply was replaced, and the unit is now back online. While the Parsivel went offline due to the PSU failure, the gauge data logger was online and the gauge data has been retained for the entire event.

APU15: WLAN antenna needed readjusting.
